△ [Claude](#) was used for this prompt.

How can i force a reformat on a sd-card using a debian 13 system?

LLM response

```
# 1. Wipe first 100MB to clear corrupt data
sudo dd if=/dev/zero of=/dev/sdb bs=1M count=100 conv=notrunc

# 2. Force kernel to eject the device
echo 1 | sudo tee /sys/block/sdb/device/delete

# 3. Physically unplug and replug the SD card, then check new device name
lsblk

# 4. Format with the new device name
sudo mkfs.vfat -F 32 -I /dev/sda
```
